

RECONDITIONING OF RED CLAY TENNIS COURTS WITH VENUS

It is recommended to use Venus every month to avoid that the court clay becomes too hard and damaged by holes: **it takes just 20 minutes to refresh and smooth the surface of a whole tennis court clay!**

- 1] Remove the network gaming and wet the soil.
- 2] For a regular maintenance you can use the standard rotor and you don't have to remove the white lines: you can pass over without damaging them. **This is a real innovation which leads a considerable saving of money and time.**
- 3] Adjust Venus at a depth of 15/20 mm and let the machine move forward on the whole surface of court drawing parallel lines of pulverized earth.
- 4] Smooth with a manual level the accumulations that Venus haven't already leveled out. If necessary add fresh clay sprinkling it with a shovel.
- 5] Further wet the tennis court in order to reassemble the earth.

THE MORE FREQUENT IS A REGULAR SIMPLE MAINTENANCE MADE BY VENUS, THE LESS NECESSARY IS THE HARD SPECIAL MAINTENANCE!

TERRAROSSA

AUTOMATIC
RECONDITIONER
FOR RED CLAY
TENNIS COURTS

...PLAYERS ARE GRATEFUL!

The first machine for reconditioning of red clay tennis courts that scarifies the surface layer for fast weekly maintenance.

It digs down and finely grinds the base layer up to a depth of 30 mm.

DEEP AND SPEEDY

The regulator adjust the depth and therefore the force of impact of the rotating blades, which work the clay surface to the desired depth. The rotor composed by 104 tilting blades assures not to damage the white line of tennis court.

The accelerator controls the speed of the rotor: the faster it runs, the more it finely pulverized the clay to dust.

BLADES

The blades are easily interchangeable and they hardly wear thanks to the special treatment of the steel C67S.

MOVIES

Please visit our Homepage www.venus-terrarossa.it to see the machine at work and contact us for any information you may need and curiosity you may have! Our telephone number is **0039 0721 391222** and our e-mail Address is info@venus-terrarossa.it

SAFETY HANDLE

A safety handle prevents errors or problems in case of emergency: if the operator removes his hand from the handle grip the engine cuts off, the rotor is blocked and the machine stops moving.

PROTECTIVE COVER

The machine is fitted with a quick-fitting cover to shield the operator from the dust of the scarified clay, and to spread the excess clay when performing deeper digging operation.

TECHNICAL DETAILS AND PERFORMANCE

overall dimensions: 127x49x94 cm	maximum depth: 30 mm
weight: 110 kg	suggested depth: 15 mm
engine: HONDA petrol 5,5 hp	engine noise level (at full throttle): 83,5 dB(A)
number of blades: 104	estimated time to scarify a tennis court: 20'-25'
minimum depth: 1 mm
